

MultiCyclone 70XL solution for Seaview Haven Holiday Park

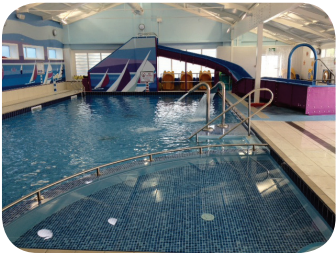

The Seaview Haven Holiday Camp at Weymouth Bay, on England’s south coast, is defined by its water facilities, which includes heated indoor and outdoor swimming pools. And when the camp’s operators undertook a major refurbishment of the indoor pool in February 2013, the contractor discovered a ‘small problem’.

An existing indoor pool was being refurbished and upgraded, but the plant room could not be altered which meant there was insufficient room to add another filter in order to meet the latest PWTAG standards.

The MultiCyclone 70XL is designed specifically for use in commercial pools and given the 90m Seaview Haven pool caters for a large volume of people, the MultiCyclone 70XL was the perfect solution to address the client’s space and budget restrictions.

The MultiCyclone 70XL, gives the staff at Seaview Holiday Park a break from the intense maintenance schedule, as the system requires less backwashing than the previous filter.

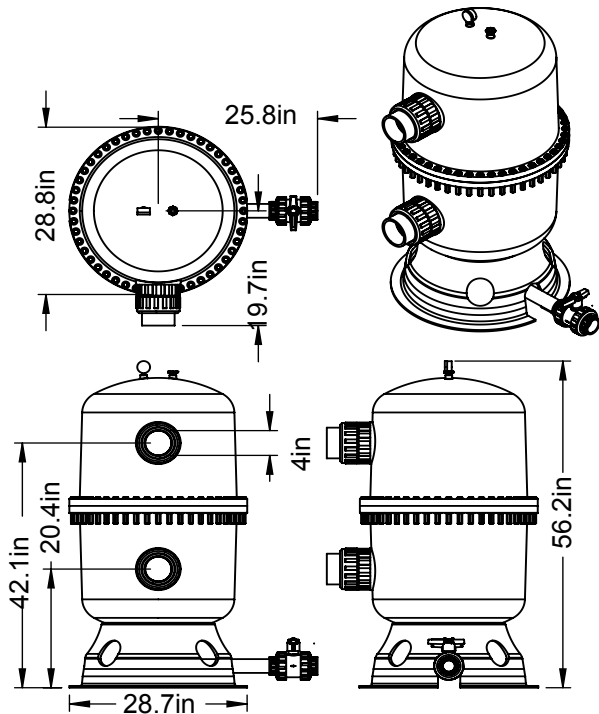

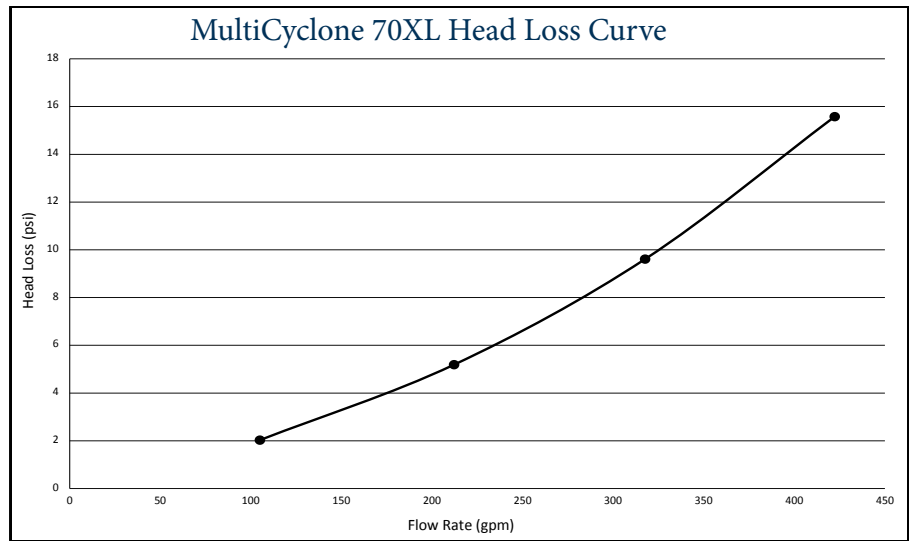

The MultiCyclone 70XL gave an opportunity to upgrade filtration whilst taking up less plant room space than another filter, and at less cost.

Part Number	Product	Nom.Size
200392	MultiCyclone 70 XL Commercial	4"

SPECIFICATIONS

Model	Conn Size (in.)	Min Flow (gpm)	Max Flow (gpm)	Max Pressure
70XL	4"	105	423	50

Established since 1981, Waterco is an Australian public listed company involved in the manufacture and distribution of:

- Swimming pool/spa equipment and chemicals
- Domestic water filters, softeners and purifiers
- Commercial and Industrial water treatment equipment.

Waterco’s research & development team has created an innovative range of award winning products.

The company’s advanced fibreglass winding and pioneering plastic moulding techniques have delivered premium quality products to over 40 countries via its branches operating in Australia, New Zealand, Malaysia, China, the United Kingdom, United States of America, Canada, Indonesia, Singapore and France.

Waterco Micron fibreglass filters

MultiCyclone XL filters are part of Waterco’s comprehensive range of Micron fibreglass filters. Manufactured from the highest grade of non corrosive materials and employing the latest in fibreglass winding technology.

# MULTI CYCLONE 70 XL

## 1st STAGE INDUSTRIAL CENTRIFUGAL WATER FILTRATION

The MultiCyclone Commercial 70XL is a new addition to the MultiCyclone range. Although very different in appearance to the previously released models, this unit still has all the water and energy saving benefits of the standard MultiCyclone model. Specifically designed for commercial installations, the MultiCyclone Commercial has 4 " ports and uses 70 cyclones allowing it to function with a flow rate of 423gpm. The debris can be seen through the clear sight glass and flushed out of the purge valve.

- Minimizes filter maintenance and saves water
- Ideal for new and existing installations
- Dramatically reduces waste water
- Extends filter cycles by at least 4 times
- No filter media to clean or replace
- Simple installation
- Works with all equipment brands
- 2 year warranty

### Multi-award winning

Waterco has developed a revolutionary centrifugal filtration system that is both economical and eco-friendly.

Since launching in 2008, Waterco's MultiCyclone technology has continued to impress the world with its innovative design, which has earned it 11 local and international awards, including 2007 Piscina Barcelona Sustainability Award, Splash Environmental product of the year 2010, Best Product Award at SPATEX UK in 2011 and 2012, and the Design Master Green Award at India's WAVES International Pool, Spa and Bath Expo.

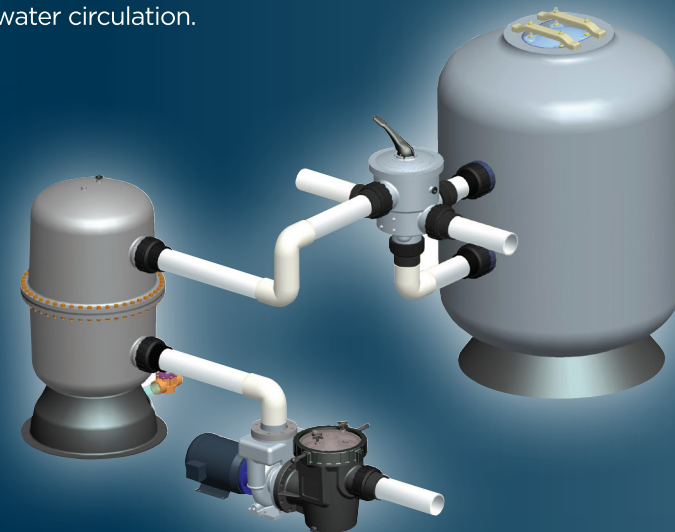

The MultiCyclone 70XL is an evolution of Waterco's MultiCyclone technology. Waterco has specially created a commercial version by increasing its number of hydrocyclones to cater for the higher flow rates and redesigned to cope with the demanding requirements of commercial installations.

The MultiCyclone 70XL has been specially created to handle larger water capacities for commercial and industrial applications.

### Ease filter workload

An Australian innovation, MultiCyclone 70XL pre-filters up to 80% of the filter's incoming dirt load prior to the main filter, reducing the load on the filter and therefore reducing the frequency of filter maintenance by up to 80% and saving backwash water.

As the MultiCyclone 70XL intercepts more and more sediment, the flow rate remains unchanged, improving pool water circulation.

### Centrifugal water filtration

MultiCyclone 70XL works on the basis of centrifugal water filtration and is designed with no moving parts and no filter media to clean or replace.

UV and corrosion proof

Glass filled thermoplastic housing

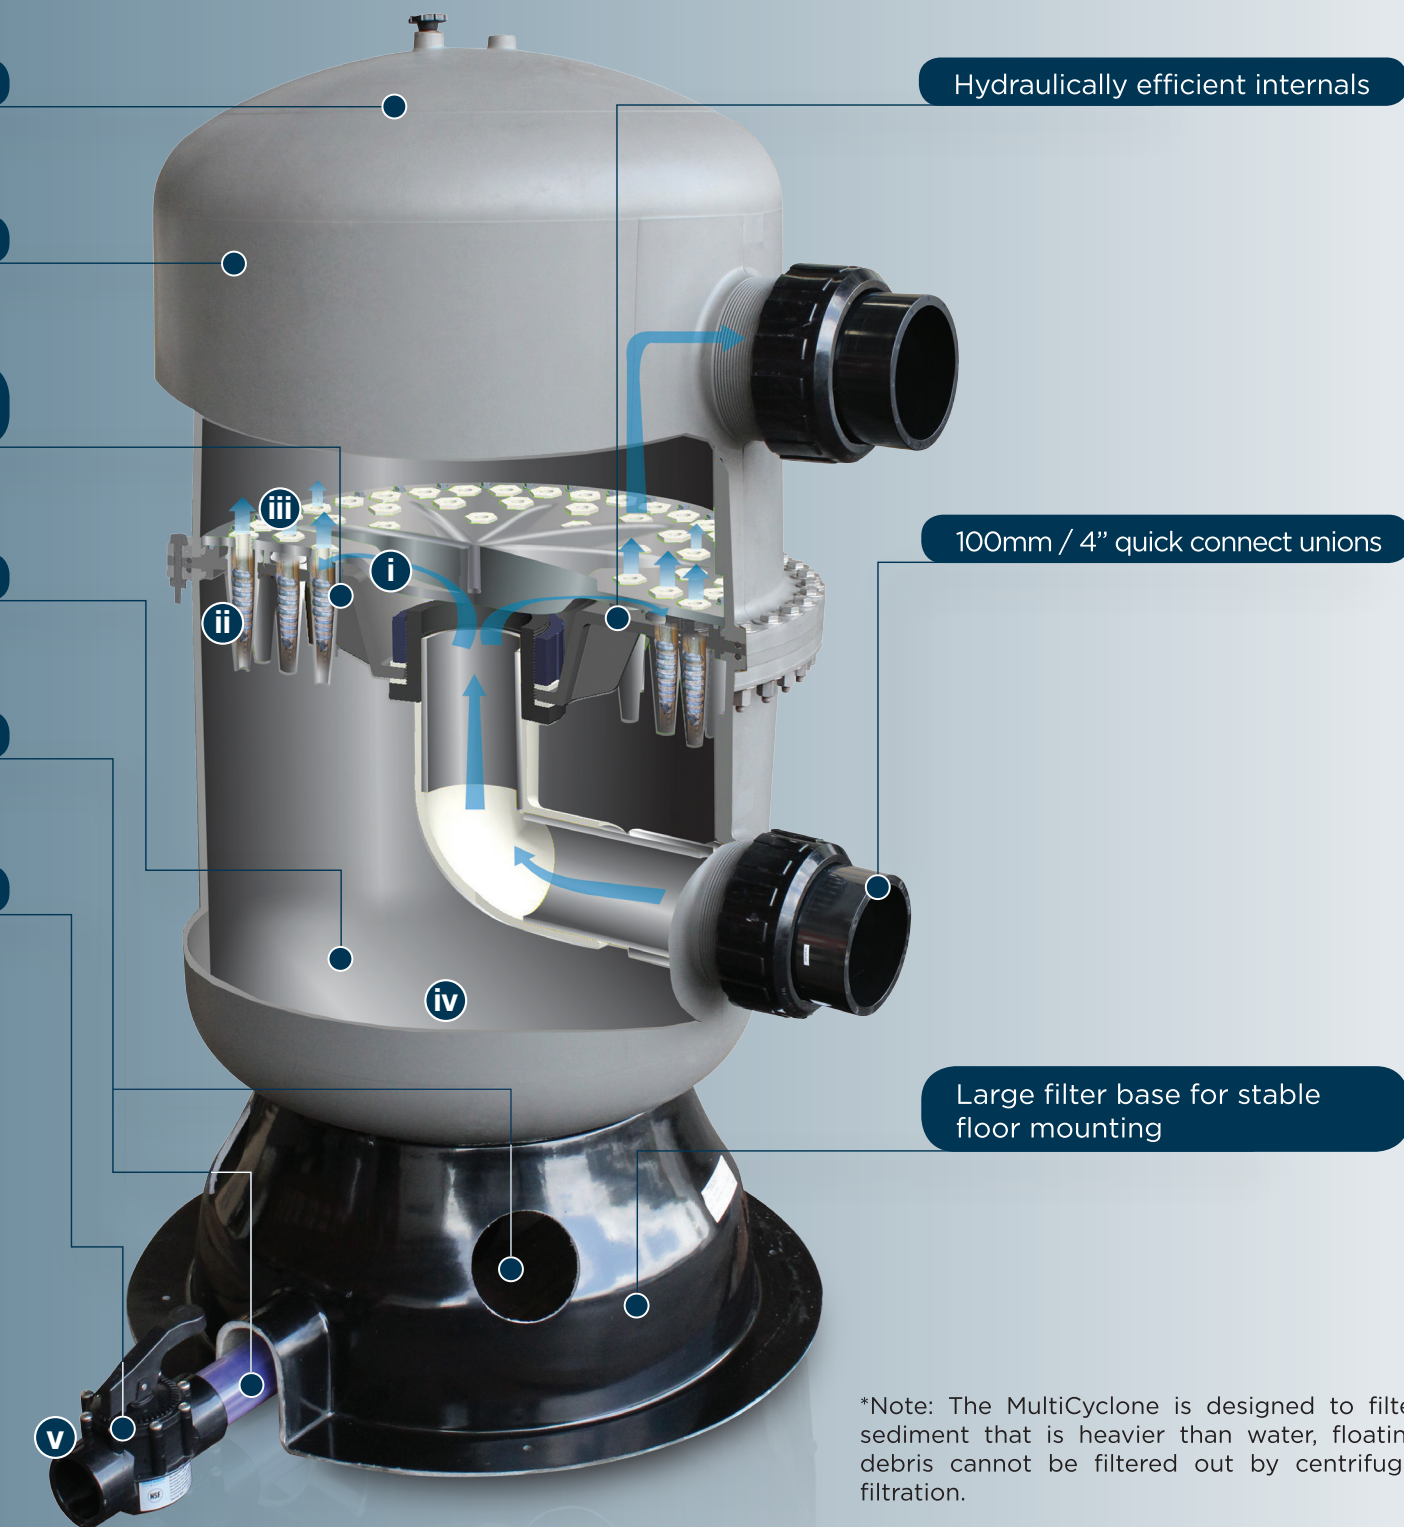

70 hydrocyclones configured for optimal filtration

Sediment chamber

Sediment inspection port

Purge valve for ease of maintenance

- Incoming water enters 70 hydro cyclones tangentially, generating a strong centrifugal effect.
- The sediment is spun out to the hydro cyclone's wall, and then spirals down to the sediment chamber\*.
- The filtered water migrates towards the centre of the hydro cyclone where the flow reverses and spirals upwards through the outlet.
- Accumulation of sediment can be visibly monitored through the MultiCyclone's inspection ports
- The MultiCyclone is easily cleaned by opening its purge valve. Only 300 litres of water is discharged to cleanse the MultiCyclone.

\*Note: The MultiCyclone is designed to filter sediment that is heavier than water, floating debris cannot be filtered out by centrifugal filtration.
